

B. AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [0008] as follows:

A parking system includes an Internet-accessible Web server storing substantially real-time parking data ~~corresponding to~~ associated with occupancy of a plurality of parking spaces. The parking data can be rendered by a display device running a browser application. The Web server transmits the parking data in response to a request sent from the browser application. The Web server communicates with at least one of a detector and a parking terminal configured to collect and transmit the parking data for the plurality of parking spaces.

Please amend the ABSTRACT as follows:

A parking system includes an Internet-accessible Web server storing substantially real-time parking data ~~corresponding to~~ associated with occupancy of a plurality of parking spaces. The parking data can be rendered by a display device running a browser application. The Web server transmits the parking data in response to a request sent from the browser application. The Web server communicates with at least one of a detector and a parking terminal configured to collect and transmit the parking data for the plurality of parking spaces.
